3.1 Definition	20

1. Introduction to UCP

Welcome to UCP User guide.

This document helps users to provision different types of Linux Machines, namely the following

- a. Plain Windows Images
- b. Windows IIS Images

In addition this document also emphasizes on various features such as

- a. Additional Disk requests while raising a service order
- b. Provisioning in desired zones
- c. Provisioning with desired availability sets
- d. Cloning of Machines

2. Procedure

Step 1 – Login to UCP

Step 2 – Navigate to the Service Order by Clicking on Order -> New VM Instance -> Azure

Step 3 – Service Order Page appears as below

In Basic Info Page please select the Following details

- a. For Production servers please select ITS-SPCS-Azure-Managed-VM-PROD-122
- b. For Test servers please select ITS-SPCS-Azure-Managed-VM-PROD-123

Azure - New VM Instance

1 Basic Info 2 VM Details

Subscription* 7e8e1e96-c128-42b8-a445-d18281754604 / ITS-SPCS-Azure-M

VM Resource Group* rg-its-poc-chlca

Gallery Name* sig_dhl_iaas_images

Shared Resource Group : rg-its-spcs-managed-infra-eus-001

- c. VM Resource group automatically populates to the one that you're assigned to, otherwise you may click on the drop-down option to select relevant Resource Group.
- d. Gallery Name is automatically set to sig_dhl_iaas_images. This cannot be modified.
- e. Servers can be provisioned based on two types of Operating Systems
 - a. Linux
 - b. Windows

OS Type*	ALL
OS Add-ons*	ALL
	Linux
	Windows

- f. Selecting Windows Will show the Add-Ons as below.

OS Type*	Windows
OS Add-ons*	ALL
Image Name*	ALL
Image Version*	Plain Images
	Windows + MSSQL
	Windows + IIS

- g. Selecting relevant Add-on will then filter to the related images with which servers can be provisioned. For example this is how a Plain Windows template can be selected.

OS Type*	Windows
OS Add-ons*	Plain Images
Image Name*	Windows-Server-2016-STD
Image Version*	--SELECT--
	Windows-Server-2016-STD

- h. After selecting the desired image the latest version of the image will automatically appear.

OS Type*	Windows
OS Add-ons*	Plain Images
Image Name*	Windows-Server-2016-STD
Image Version*	1.0.3

- i. The Environment is by default selected to Production for ITS-SPCS-Azure-Managed-VM-PROD-122 and as TEST for ITS-SPCS-Azure-Managed-VM-TEST-123

Environment*	Production
Network Identify*	--SELECT--
	Production

Environment*	Test
Network Identify*	--SELECT--
	Test

- j. Selection either one of the options for Classified or Unclassified Networks.

- a. Servers provisioned in Classified Network have access to the internet
- b. Whereas Server provisioned in Unclassified Network do not have access to the internet.

Network Identify*	Classified
Network Resource Group*	--SELECT--
	Unclassified
	Classified

- k. Network Resource Group is set to Default.
- l. Please select desired Region. The selected region is the datacenter where the requested server will be provisioned.

Region*	West Europe
Virtual Network*	--SELECT--
	West Europe
	Southeast Asia
Subnet*	East US

- m. Automatically the relevant Virtual Network is selected along with the subnet.

Region*	West Europe
Virtual Network*	ITS-SPCS-Azure-Managed-VM-TEST-123-weu
Subnet*	Classified-Subnet-4

Region*	Southeast Asia
Virtual Network*	ITS-SPCS-Azure-Managed-VM-PROD-122-sea
Subnet*	Classified-Subnet-4

Region*	East US
Virtual Network*	ITS-SPCS-Azure-Managed-VM-PROD-122-eus
Subnet*	Classified-Subnet-4

- n. Select the number of servers that need to be provisioned in a single order.
 - a. At a time, a maximum of 10 similar servers can be ordered & provisioned.
 - b. Note: These servers will have exactly the same base machine or SKU. This will be explained in the following steps

VM Selection ☒ Quantity ☐ Clustering

VM Count* 1

Availability Set/Zone

Fields highlighted in BLUE color

1
2
3
4
5
6
7
8
9
10

- o. Cluster option will be explained in the user guide for Cluster Servers.
- p. For every order either a Availability Zone / Availability Set / None option can be selected.

Availability Set/Zone ☒ Zone ☐ Set ☐ None

- q. After selected all the relevant options please click on Next on the bottom Right of the screen.

VM Selection ☒ Quantity ☐ Clustering

VM Count* 1

Availability Set/Zone ☒ Zone ☐ Set ☐ None

Next

Step 4 – The next page allows the user to select the Base Machine details.

Azure - New VM Instance

Basic Info 2 VM Details 3 Backup & GSN

VM Size* [Select VM Size](#) OS Type Windows

OS Storage Type* Standard_LRS

Note: Mv2-series, DC-series, NDv2-series, Msv2 and Mdsv2-series Medium Memory do not support Generation 1 VM images and only support a subset of Generation 2 images

VM1

VM Name* xai22ws6l0007 ✓ VM Zone* 1

VM NIC* xai22ws6l0007-nic

Add Disks

Back Next

- a. Select the desired server size by clicking on “Select VM Size” which will then show the list of VM sizes available for the relevant image.
 - a. Note: For each image of Linux & Windows only the supported list of VM SKUs will appear.

VM Size

Save

[Note](#): For Oracle Prod VM's please select SKU D series or higher.

VM1

- The Network details & NIC information is automatically populated and cannot be modified.
- However, a relevant zone can be selected based on previous selection in Step-3.p

VM1

VM Name*

xa122ws610007

VM Zone*

1

VM NIC*

xa122ws610007-nic

Add Disks

- User may choose to add Additional disks if required. This is possible by clicking on Add Disks button.
 - Note : The number of maximum disks that can be added is pre-defined by the Size of the base machined that has been selected in Step-4.a.a

- b. In the below mentioned example a server size is selected where it can support only 2 additional disks
- c. The additional disks can also be selected based on its disk types & sizes available.

Disk Name 1*	Disk Storage Type 1*	Disk Storage SKU 1*	Disk Size 1*	Disk Host Caching 1*	
xa122ws610007-disk1	StandardSSD_LRS	E3 - 16 GB	16 GB	None	-
Disk Name 2*	Disk Storage Type 2*	Disk Storage SKU 2*	Disk Size 2*	Disk Host Caching 2*	
xa122ws610007-disk2	Standard_LRS	S4 - 32 GB	32 GB	None	-

- d. Disk Storage SKU1 dropdown option will provide the list of supported disk types along with the size of the disk

--SELECT--

S10 - 128 GB

S15 - 256 GB

S20 - 512 GB

S30 - 1024 GB

S4 - 32 GB

S40 - 2048 GB

S50 - 4096 GB

S6 - 64 GB

S60 - 8192 GB

S70 - 16384 GB

S80 - 32767 GB

--SELECT--

- e. After selecting relevant disk type & size, Disk Host caching can be selected based on the options available

Disk Name 1*	Disk Storage Type 1*	Disk Storage SKU 1*	Disk Size 1*	Disk Host Caching 1*	
xa122ws610007-disk1	StandardSSD_LRS	E3 - 16 GB	16 GB	None	-
Disk Name 2*	Disk Storage Type 2*	Disk Storage SKU 2*	Disk Size 2*	--SELECT--	
xa122ws610007-disk2	Standard_LRS	S4 - 32 GB	32 GB	None	-
				ReadOnly	
				ReadWrite	

- f. After configuring the desired option, click next on the bottom right to select Backup related information and Global Service Now Details for Business purposes

Step 5 – user will be navigated to Order List screen for approving the provisioning.

Note: If the user requesting for the server is a Team Member then the Resource Group Owner alone can approve or reject the Order request.

Note: if the user requesting for the server is a Team Manager then he/she can approve or reject the order request.

After approving the request the Resource Group Owner/ Team Manager should click on Submit to Order the server for Provisioning.

Note: Until the Submit button is clicked, the Order will not be sent for Provisioning.
